## Survey Questions

Accountability improves everyone's performance. Patient engagement has been sought after to improve Patient Safety and Infection Prevention in the healthcare setting. Below are a few examples of the survey questions that you can ask your patients for your patient satisfaction survey. Please let us know which ones you choose and the feedback you get from your patients so we can stay up to date with patient safety improvements.

1) Did you see your nurse or physician wash or sanitize their hands during your hospital stay?

2) Did you see a nurse or physician touch you or another patient without having washed or sanitized their hands before that contact?

3) Did you hear a family member or friend stop a nurse or physician from touching a patient? Presumably this could be due to the person thought the physician or nurse should have washed or sanitized their hands before touching you or another patient?

4) Did you see your nurse or physician wearing a Champion Handwasher button or sticker during your hospital stay?

5) Do you know anyone who contracted an infection while staying in any hospital?

6) Do you have any recommendations on how our hospital procedures and staff could reassure you that you will never contract an infection while in this hospital?

Thank you for helping to make healthcare more “patient safe”!

-Dr. Will
